

Case Study

CWST Relining

- Boutique hotel in central Edinburgh
- Recently extensively refurbished
- DMA Canyon requested to carry out L8 Risk Assessment

- Risk Assessment identified corroded non-compliant water tanks
- DMA Canyon advised replacement or relining of tanks which fed bars, restaurants and residents rooms (including showers)

DMA Canyon plumbing consultants attended site to investigate the options for replacing or upgrading the tanks

Issues faced:

- External water tanks on 4th storey roof
- Poor access
- Tank replacement very costly and impractical
- Tanks linked together
- Hotel had to remain open during works

On investigation it was agreed with site that relining of the tanks was the most practical & cost effective option.

- DMA Canyon re-plumbed system to allow each on tank to be worked on individually to keep hotel operational at all times
- Other trades sub-contracted to create access to tanks and temporarily seal roof
- CWSTs re-lined whilst in-situ with a WRAS approved coating with no disruption to hotel or guests
- DMA Canyon completed plumbing remedial works and upgrade of water tanks to ensure L8 compliance

Successful Completion of Works – Satisfied Client

I would love to take the opportunity to thank you and your team one more time, for the brilliant job you have done at our hotel. I still cannot believe that you had to switch off the water for a few hours only, although you had to work on two tanks.

I haven't received a single complaint from the guests staying with us during the time your team was at Nira Caledonia.

I will definitely recommend your company to my colleagues and friends.

Thank you!

Carina Ratzke
